THE INTERIOR JOURNAL.

FRIDAY, NOVEMBER : 22, 1872.

How "Chromos" are Made—Interesting Particulars.

The reader probably understands how a lithograph print is produced. The picture to be copied is accurately drawn upon a peculiar stone, with a crayon containing oil. The stone is then wet, but the water, while wetting all the rest of the stone, will not adhere to the portions containing the ink. An ink-roller is run over the stone, leaving more ink on every point and line where the ink-picture is already on it. Thick paper is then laid on and a powerful pressure applied. The paper picks off some ink, and there is left upon it a perfect copy of the original picture. The wetting and inking and pressing is repeated as many times as copies are wanted. This is for one color. Three-fourths or more of all the pictures seen on the walls of rooms throughout the country are lithographs. Many of them are rudely colored by hand.

To produce a Chromo (or chromo-lithograph) of a colored picture, like an oil-painting, a large number of stones are used—from five to twenty. The portion of the painting having one shade of color is put in its proper place on the stone, with colored ink. Another stone contains another shade, and so on, and the paper being carefully printed from a succession of these stones, finally contains an exact reproduction of the original painting—when well done, so accurate that only an experienced eye can tell which is the original or which is the copy. After all the shades of colors are put on, the chroma is pressed upon a final stone so engraved and grooved that it gives the whole surface the exact appearance of a painting on real canvas. The art is now so perfected that copies of costly paintings are reproduced, as beautiful as the originals, for a small sum, compared with the cost of the originals. It will be seen that the great cost is in first preparing the stones. Five or six months are required to do this well, but when once done the chief cost is for the several printings required.

MOUNTING CHROMOS.

When chromos leave the printers, they are on thick heavy paper, like ordinary engravings, and they can then be framed in glass. But a great improvement is secured by carefully backing them with very heavy binder's-board—that is, a strong, heavy pasteboard, upon which they are pressed smoothly in a powerful hydraulic press. This requires care and skill in order to have the work smooth and even, without injury to the chromo. The whole is then covered with a refined, transparent varnish, which not only brings out the colors more strongly, but preserves the surface so that it can be wiped free from dust or fly-specks, and even be washed. The chromos thus mounted can be set upon the mantel, or hung upon the wall, or be put into a frame with or without glass.—*Hearth and Home.*

An Admirable Surgical Operation

Here is something for all surgeons to read and admire. It comes to us, like gold and great pears, from California. In 1869, Luther Corey, in Santa Cruz county, had his arm broken in two places above the elbow. One of the fractures knitted and healed; the other, owing to a split of the bone being between the ends of the fracture, did not. After suffering pain, Mr. Corey went to San Francisco, and the surgeons there opened the flesh on his arm, and cut the callous part from off the ends of the bones, pressing the ends together and binding the arm in splints. So they remained for eighteen months, but still the bones did not knit, and the muscles of the arm became shriveled up and useless. Then Mr. Corey applied to Dr. Lane, of San Francisco, who forthwith performed the prettiest little job of surgical workmanship conceivable. He opened the arm, sprung out the end of the bones, and, cutting off the callous parts, he beveled the ends of the bones, so that each would lap a little over the other. He then riveted them together with a silver wire, and set the arm in a case. The bone then knit and healed, leaving the arm two inches shorter. Mr. Corey now uses his arm at his work, and, with the limb useful again, is once more a tip-top sawyer.—*N. Y. Tribune.*

Improved Method of Vaccination.

In view of the prevalence of small-pox at various points all over this country and the importance of successful vaccination, the suggestion of an English physician, Mr. Ellis, may be of some importance. This gentleman remarks that ordinary vaccination is performed by scraping off the epidermis, and thrusting the vaccine virus into a puncture made by the lancet. A greatly improved method, however, consists in first raising a small blister by a drop of cantharides applied to the skin. This is to be pricked, and the drop of fluid let out, and then a fine vaccine point put into this place, and withdrawn after a moment of delay; the epidermis falls back and quite excludes the air, shutting out any germs that may be floating in the atmosphere. This method has been practiced by Mr. Ellis for twenty years; and out of one hundred cases of vaccination which he has performed, he has never had an instance of blood-poisoning or abscess, while by the ordinary method the occurrence of secondary abcess is by no means uncommon, and that of pyemia is often observed. The comparative safety of this method is believed to be due, first, to the exclusion of the air; and second to the lesser size of the aperture for the introduction of mischief than when the punctures are made by the lancet.

BOWLING GREEN girls prefer a nice 'Bus to an Old Hack.

Pistols and Coffee.

General N. B. Forrest, of Tennessee, having been accused, in public speech by Gen. Hammond, at Kansas, Missouri, of appropriating to his own use several millions of the proceeds of Alabama railroad bonds, writes to the Memphis *Appeal* showing the utter falsehood of the charge and concludes his letter with the following strong language:

"This is not the first time I have been personally traduced by persons who bear the title of Federal officer; and on a former occasion I have branded such charges in such terms (if there had been proper military courage to back up an insult) as afforded ample opportunity to my assailants.

I now propose to offer the same opportunity to Gen. Hammond, to whom I desire to address myself in plain and unmistakable terms, not stronger than the imputation upon me deserves, but so plain that his understanding of my meaning and purpose cannot be at fault. He is a liar, (I can use no other language to one so base), a cowardly puppy, and a scoundrel. If he owns the title of General in the Federal army, he disgraces it; and if I have anything like justice and fair dealing at the hands of the journal that published his unprovoked and wanton outrage upon me, this brand of a liar, coward and scoundrel will spread as far as his slander, and live longer. That he may be assured of my willingness to bear from him, he is notified that a letter addressed to me at Memphis will meet with attention. N. B. FORREST.

Winter Clothing.

In his experiments to determine the heat-conducting power of linen, cotton, wool, and silk, Sir Humphrey Davy found not only that these materials conducted heat in the order given above, linen being the best, but also that the tightness or looseness of weaving possessed an important influence. It is therefore evident that in the selection of winter clothing, and especially of that to be worn next to the skin, the materials of least conducting power, as wool and silk should be chosen, and the fabrics should be chosen, and the fabrics should be loosely woven.

As regards the external garments the same rules apply with equal force, but in this case care should be taken to remove overcoats and shawls when in a warm room; especially should this precaution be observed in the instance of the furs worn by ladies. The habit of wearing these articles for hours in succession while shopping and visiting, often so weakens the powers of resistance in the wearers that they become the ready victims of inflammations of the throat and lungs. To such an extent does this occur in New York that many of the most skillful physicians advise their patients to discontinue the use of furs, and the advice is often followed with the most satisfactory results.—*Scribner's.*

Apples.

With most of us the value of the apple as an article of food is greatly underrated. Besides containing a large amount of sugar, mucilage, and other nutritive matter, apples contain vegetable acids, aromatic qualities, etc., which act powerfully in the capacity of refrigerants, tonics, antiseptics; and, freely used at the season of mellow ripeness, they prevent debility, indigestion, and avert, without doubt, many of the "ills which the flesh is heir to." The operatives of Cornwall consider ripe apples nearly as nourishing as bread, and far more than potatoes. In the year 1801—which was a year of much scarcity—apples, instead of being converted into cider, were sold to the poor; and the laborers asserted that they could "stand their work" on baked apples without meat, whereas potato diet required meat or other substantial nutriment. The French and Germans use apples extensively. The laborers depend upon them as an article of food, and frequently make a dinner of sliced apples and bread. There is no food cooked in so many different ways in our country as apples; nor is there any fruit the value of which, as an article of nutriment, is as great and so little appreciated.

A Sad Affair.

One night last week, Mr. Henry Wilson and a son of 'Squire C. F. James went out hunting, and, being successful in striking a trail, they soon had a "coon up a tree." Rather than chop the tree, Wilson concluded to climb it and shake the coon off, and, accordingly, started up for that purpose. He had climbed some distance when young James, who was watching for the game, called to him to stop, saying that he saw the animal's eyes, and could shoot it. To which Wilson replied, "all right," when James fired at what he supposed to be the eyes of the animal, but which, to his horror, turned out to be the eyes of his friend Wilson, one of which he shot out. Wilson is doing as well as could be expected, and will recover. No blame is attached to young James, as it was quite dark and he was unable to see his friend, and, hence, mistook his eyes for those of the coon.—*Russellville Herald.*

COAL

T. T. Daviess, agent for the sale of Wm. Owsley's superior Coal, will furnish coal in any quantities to suit purchasers, at the lowest market price.

P. F. WALSH,
MERCHANT TAILOR,
No 70 Fourth street bet. Main and Market.

Full Stock Gents' Furnishing Goods

NO CURE, NO CHARGE

$5000 Reward offered to the Proprietors of any Medicine for Rheumatism and Neuralgia able to produce one-fourth as many genuine cures made within the same period of time as Dr. Fitler's Vegetable Rheumatic Remedy—the scientific prescription of an eminent educated physician, and the only reliable specific ever discovered.

$2000 Reward offered to any Person proving Jos. P. Fitler, M. D., to be other than a graduate of the celebrated University of Pennsylvania in 1833, and Professor of Chemistry and Toxicology.

$1000 Reward to any Chemist, Physician, or Others able to discover Iodide of Potassa, Colchicum, Mercury, or anything injurious to the system in Dr. Fitler's Rheumatic Syrup.

$500 Reward for any evidence that Dr. J. P. Fitler has not been particularly and successfully treating Rheumatism and Neuralgia, professionally, as a specialty for many years. Curing 98 in every 100 treated.

$250 Reward for the name of any preparation for Rheumatism and Neuralgia warranted and sold under a similar legal guarantee, setting forth the exact number of bottles to cure or return the amount paid for same to the patient in case of failure to cure. Full description of cases requiring guarantees must be forwarded by letter to Philadelphia. The guarantee, signed and stating quantity to cure, will be returned by mail with advice and instructions without any charge. Address letters, Dr. J. P. Fitler, 45 south Fourth Street. No other remedy is offered on such honorable terms.

$100 Reward is offered for any cure of Neuralgia Or Rheumatism of any form, pronounced curable, that Dr. FITLER'S RHEUMATIC SYRUP will not cure. The proof that no other specific exists is found in every community in persons afflicted for many years past and still suffering. *If physicians could cure it, if a specific did exist, this would not be so.* Dr. Fitler's Vegetable Rheumatic Syrup is sold by druggists at $1 25 per bottle—six bottles $6 50. Full information, with circular containing reference to physicians, clergymen, &c., may be obtained of W. H. ANDERSON, sole agent for Stanford. 5-ly

1,000 AGENTS WANTED
FOR THE
PEERLESS
BEE-HIVE!!
Patented Dec. 26th, 1871, by
J. S. PROCTER,
Of Franklin, Kntucky.

To Bee-keepers Everywhere:

The following points of excellence comprise a few of the many, that may be truthfully claimed for my hive:

1. It is simple in construction, neat in appearance and is the most easily understood and managed movable comb frame Hive ever invented.

2. The only material required in its construction is 26 feet of lumber, the nails necessary to fasten it together and a few small scraps of wire cloth to cover ventilators. Not a screw, screw eye, hook and eye, hinge, pivot, piece of tin, tin tube, glass, or other expensive material is used in its construction.

3. When properly used, it is the coolest hive for summer and as warm as the warmest for winter use, affording ample protection for the successful wintering of colonies on the summer stand.

4. By its use the necessity for "honey boards" or "honey bars" is entirely dispensed with, while the chambers may be contracted to suit the condition of any sized colony of from one single frame to ten, enabling the keeper to confine the animal heat to the space only occupied by the colony.

5. Less time and labor is required in handling, and the brood is less exposed than in using other first-class hives.

6. While it does not claim to be positively "moth proof" under all circumstances, yet it is provided with the least expensive and most effectual device for the capture and distruction of moth millers ever attached to a hive, and will do more to protect the bees from the ravages of that terrible scourge, than all the expensive and complicated "traps" ever invented and will in most cases afford perfect protection.

7. The construction is such that the frames and false ends fit equally well either the brood or surplus chamber.

8. A number of small colonies or nuclei may be used in the same hive, or one or more may be kept in surplus chamber, receiving all the necessary natural warmth from the colony confined to the brood chamber.

Other advantages might be enumerated, but the above are deemed sufficient.

An examination of fifteen minutes, will, I believe, satisfy any *disinterested*, practical Apiarian, of the superiority of the
"Peerless" Hive
over any, and all others; and I CHALLENGE COMPARISON with any Hive on the AMERICAN CONTINENT, *North, South, East or West.*

Farm Rights and Sample Hive......$10 00
Peerless Circular and Beginners Manual......10

Territory will be sold very low to those wishing to purchase, and the terms made easy. For any further information enclose stamp, and address, plainly,
